

About us

The Genomics Group, Bioinformatics and Evolution was formed in 1993. The UAB has given us recognition (ANE) in 2000. We are a force Research Group of the Generalitat de Catalunya (2005SGR-00892). The group has expanded researchers integrating new research lines directly related to or consistent with the original group. The overall goal of our group is to better understand the origins and nature of the genetic diversity that is the raw material of biological evolution and current biodiversity, using both experimental and bioinformatic approach.
